DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tonomoto (US 5,066,983) in view of Ogiri et al. (US 4,730,205).
- 4. Tonomoto (...983) discloses an image forming apparatus comprising: a photosensitive member (21) which is rotatably disposed, and on which an electrostatic latent image is developed to form a toner image (col. 5, line 39 col. 6, line 15); a cleaning blade which comprises a body portion (51) configured by an elastic plate member (col. 6, lines 36-40), and a base plate (55) portion supporting the body portion (col. 6, lines 22-25 and 46-47), and which removes away a

Art Unit: 2852

toner that remains on the photosensitive member after the toner image is transferred, by means of

the body portion that pressingly contacts the photosensitive member (col. 6, lines 25-34); a

housing (54) that holds the cleaning blade; and a recess which is disposed in the housing, and

which accommodates a part of the base plate (figures 2-4), wherein the cleaning blade being

pressingly secured to the recess by the photosensitive member (figures 2-4). However,

Tonomoto (...983) does not disclose the housing holding the photosensitive member as well as

the cleaning blade. Ogiri et al. (...205) disclose an image forming apparatus including a housing

(U) that holds a photosensitive member and a cleaning blade (col. 9, lines 11-21; and figures 1

and 2). It would have been obvious to one of ordinary skill in the art at the time of the invention

to have the claimed housing, as disclosed by Ogiri et al. (...205), since such a housing is well

known in the art for ease of maintenance.

Allowable Subject Matter

5. Claims 2-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and

any intervening claims.

Response to Arguments

6. Applicant's arguments filed 6/9/05 have been fully considered but they are not

persuasive.

7. Applicant argues that none of the references disclose a cleaning blade pressingly secured

to the recess by the photosensitive member. However, Tonomoto (...983) disclose a cleaning

Art Unit: 2852

blade that comprises a body portion (51) and a base plate (55), where this cleaning blade is mounted in a recess located in the bottom of a housing (54) (figure 4), and where a photosensitive member (21) comes into pressure contact with the body portion (51) of the cleaning blade, where this contact will aid in the retention of the base plate (55) in the recess (figure 4). Even though other devices, such as a clamp, may be provided to aid in the retention of the base plate (55) of the cleaning blade in the recess, the pressure contact by the photosensitive member will also aid in the retention of the base plate (55) of the cleaning blade in the recess.

8. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the motivation is providing a photosensitive member in the same housing as a cleaning device so as to facilitate maintenance.

Final Rejection

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sandra L. Brase whose telephone number is 571-272-2131. The examiner can normally be reached on Monday-Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur T. Grimley, can be reached on 571-272-2136. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished
